IT Security and Support Procedure

Boréal Solutions inc. — FICTIONAL DOCUMENT | Version 3.0 | September 1, 2026

This document is entirely made up for developing and testing a RAG assistant. It is not a real policy or legal advice. Any resemblance to an existing company is coincidental.

IT-01 | Passwords

Passwords must be at least 14 characters long. They are not changed periodically, except when a compromise is suspected. Reusing a personal password for a company account is prohibited. The approved password manager must be used.

IT-02 | Multi-factor authentication

Multi-factor authentication is mandatory for email, the VPN and all of the company's cloud tools. SMS codes are not accepted; only the approved authenticator app and physical security keys are.

IT-03 | Devices

Only company-issued devices may access data classified as confidential. A personal phone may access email if it is enrolled in the device management system. A lost or stolen device must be reported to IT support within 2 hours.

IT-04 | Support requests

All support requests go through the Boréal Aide portal. First response times: priority 1 (blocking outage for several people) within 30 minutes; priority 2 (one employee blocked) within 4 business hours; priority 3 (routine request) within 2 business days.

IT-05 | Artificial intelligence tools

Only the approved internal AI assistant may receive company information. Using an external AI tool with internal data is prohibited without the authorization set out in the Human Resources Policy (HR-08). Sending clients' personal information to such a tool is always prohibited.

IT-06 | Software

Installing software that is not in the Boréal Aide catalogue must be requested from IT support. The review takes 5 business days. Browser extensions are subject to the same rule.

IT-07 | Backups and storage

Work files must be saved in the approved cloud locations, which are backed up automatically every night and kept for 35 days. Personal USB keys are blocked on company computers.

IT-08 | Security incident

Any suspicious email must be reported with the “Report phishing” button. If you clicked a suspicious link or entered your credentials, contact IT support immediately as priority 1.
